Professional Summary

Software Engineer with 2+ years at SAP Labs India building scalable Spring Boot microservices on SAP BTP. Led Java 8→17 migration (zero-regression), delivered 40% read-perf gains via Redis/PostgreSQL caching, automated 20+ hrs/week via Selenium pipelines. Hands-on GenAI: built production RAG chatbot (Ninjabot) with GPT OSS /Cloudflare Workers. M.Tech Software Engineering (BITS Pilani) — Distributed Systems, ML focus. Career gap (Jun 2024–present) for UPSC prep; now returning to engineering. Seeking backend/full-stack (Java/Spring Boot, React, PostgreSQL/Redis) or GenAI application roles.

EXPERIENCE

SAP Labs India — Software Engineer (Java/Spring Boot) | Bangalore | Aug 2022 – Jun 2024 (22 months)
Built Spring Boot microservices on SAP BTP for global enterprise clients. Led zero-regression Java 8 to 17 migration across distributed repos; designed Redis/PostgreSQL caching (40% read perf gain); built Selenium automation pipeline saving 20+ hrs/week; implemented Dynatrace observability with automated alerts. Worked in async-first distributed teams (Jira, GitHub PRs, CI/CD, cross-timezone collaboration). Founded "Synergy Bytes" cross-team workshop series bridging SAP UX Engineering teams.

Inventron — Software Engineer Intern | Bangalore | Mar–May 2022
Embedded/IoT software development, hardware-software integration debugging.

Career Gap — Jun 2024 to Present
Resigned from SAP Labs to prepare for UPSC Civil Services Examination. After a focused attempt, decided to return to software engineering. Technical skills maintained through portfolio projects (Ninjabot RAG chatbot, project teaser modal, orbit visualization).

EDUCATION

M.Tech Software Engineering — BITS Pilani (2022–2024)
B.E. Electronics & Communication Engineering — Alva’s Institute of Engineering & Technology, Mangalore (2018–2022)

TECHNICAL SKILLS

Languages: Java (8/11/17/21), JavaScript/TypeScript, Python, SQL, C++, Shell
Backend: Spring Boot, Spring MVC, Hibernate, Spring Cloud, Node.js, Express, SAP BTP, SAP UI5/Fiori
Frontend: React, HTML5, CSS3, JavaScript/ES6+, SAP UI5/Fiori Elements
Databases: PostgreSQL, MySQL, Redis, MongoDB, Oracle DB
Cloud/DevOps: Docker, Kubernetes (basics), SAP BTP, CI/CD (GitHub Actions, GitLab CI, Maven/Gradle), Linux/Shell
Testing: JUnit 5, Mockito, Selenium, SonarQube, JMeter
Messaging/Async: Kafka (basics), RabbitMQ (basics), WebSocket, REST, gRPC
Observability: Dynatrace, Prometheus/Grafana (basics), ELK Stack (basics)
Version Control: Git, GitHub/GitLab, trunk-based development, conventional commits
Architecture: Microservices, RESTful APIs, Domain-Driven Design, Event-Driven, CQRS basics
AI/ML: Python (pandas, numpy), fastai, PyTorch, Hugging Face, RAG pipelines, LLM fine-tuning basics

KEY PROJECTS

Ninjabot (Portfolio Chatbot) — RAG-based chatbot using GPT OSS 20b (Groq), Cloudflare Workers, terminal-style UI. End-to-end LLM application (RAG, prompt engineering, streaming responses).

Distributed Database Optimization Engine — Java, PostgreSQL, Redis, Spring, Hibernate. Redis caching/indexing strategies delivering 40% read performance improvement; resolved N+1 query issues; query plan analysis.

Scalable Microservices Architecture — Java, Spring Boot, Docker, MySQL, CI/CD. Containerized services (auth, data processing, reporting); zero-downtime deployments.

Real-Time Chat Application — React, Node.js, WebSocket, Socket.io. Bi-directional messaging with modular React components; session joining, real-time messaging, participant tracking.

AI Waste Segregation (M.Tech Dissertation) — Python, fastai, PyTorch, Computer Vision. End-to-end ML pipeline for waste classification via image processing; transfer learning with fastai; dataset curation to inference to documentation.

Scalable E-Commerce System — Java, Spring Framework, OOP, System Design. Modular e-commerce engine with admin/customer workflows, inventory management, cart mechanics, checkout processing. High cohesion, low coupling.

Dynamic Task Manager — Vanilla HTML, CSS, JavaScript (ES6+), DOM Manipulation. Lightweight task tracker without frameworks; event-driven architecture; direct DOM manipulation.
